

7 CIDOB WEB

Since October 2006, the CIDOB Foundation's institutional web site has had a new design. Technologically created with an open-source content manager, the web site allows for a quicker, more agile management of it, the saving of repetitive manual processes, and it incorporates treatments of images and multimedia in accordance with the latest technological developments. At the same time, a News section has been opened, where a

continuous, up-to-date monitoring of Foundation activities is carried out, and it has given greater visibility to the Foundation's Programmes and areas of research.

The web site features the complete texts of all of the publications of the CIDOB Foundation and it presents them in three languages: Spanish, Catalan and English.
